Index

An easily administered test of fine dexterity. The candidate is required to insert thin steel rods into small holes and secure them with the aid of a screwdriver. The working area is restricted and both hands need to be used to complete the task.

Time: 7 minutes

Mandex

Measures skill in the assembly of mechanical objects with a particular emphasis on manual dexterity. The candidate is presented with a pre-assembled structure (mounted on one end of a wooden base) consisting of six steel plates joined together by an assortment of nuts, bolts, washers and spacers. Using this as a model, the task is to build an identical assembly using the set of plates and fixings provided.

Time: 15 minutes
